First steps in ESG: Whitepaper Alpha Centauri/ISS ESG/Prof. Bassen, Uni HH

Research - Whitepaper

“Comprehensive carbon data can help generate financial outperformance and investing in line with a 2-degree scenario is a clear opportunity for value creation - helping to differentiate active managers from passive competitors.

These are the findings of the recently published paper by South Pole Group, global sustainability solutions provider, and Alpha Centauri, the Hamburg-based boutique asset manager, who today announce their partnership.” (SPG press release / RESPONSIBLE INVESTOR)

More information on our website

Climate change has finally become a mainstream investment topic within the financial industry. The wider availability of better-quality data together with the political will to achieve international climate goals have shifted the focus from investment risks to -opportunities.

It is possible to build an equity market neutral position with a negative portfolio CO2 footprint to hedge (or lower) current footprints in financial and non-financial assets.

The latest White Paper by leading experts connects the global context on investment and climate change towards a 2-degree world with the status quo of academic research, and presents latest findings on the investment and climate performance of climate smart investments in European Equities.

Maximilian Horster
Managing Director at ISS

"We see great interest from investors who both wish to tackle climate change, and to rely on well-proven methods for creating added value in purely financial terms."

White paper

The search for climate-smart investments - the case of European equities

Update 2019
(with ISS ESG)

Ulf Füllgraf
Managing Director at Alpha Centauri

"We have extensive experience in factor based investments strategies. Based on ISS-ETHIX's database, we developed a suite of climate smart portfolios - spanning equity long only, market neutral and long short solutions."

Different approaches to ESG- and Low Carbon investments

... and their drivers of risk and return with a focus on well-known factor exposures

Different Approaches

Institutional investors pursue six major ESG - strategies according to CERULLI*

Approaches differ – from outputs to outcomes		
Method	Value Proposition	Available ETF's**
Negative Screening	Value Alignment	76
ESG Integration	Value Enhancement	272
Positive Screening	Value Enhancement	156
Thematic Investment	Value Enhancement + ESG Impact	134
Impact Investment	Value Enhancement + ESG Impact	
Active Ownership	Value Alignment + Value Enhancement + ESG Impact	none

*CERULLI Associates: "Environmental, Social, and Governance (ESG) Investing in the United States" <https://info.cerulli.com/US-ESG-2019.html>

** Trackinsight.com; CONSER

Different Approaches

Two sides of the ESG-medal: principles and economic materiality

Principles, values & beliefs	Materiality
Exclusions/negative screening	“Cash Flow”- channel
<ul style="list-style-type: none">• Nuclear Energy	<ul style="list-style-type: none">• Sales
<ul style="list-style-type: none">• Controversial weapons	<ul style="list-style-type: none">• Cash Flows
<ul style="list-style-type: none">• Human and working rights	<ul style="list-style-type: none">• Earnings
<ul style="list-style-type: none">• Alcohol and tobacco	<ul style="list-style-type: none">• Dividends/Buybacks
<ul style="list-style-type: none">• Biogenetics	“Discount factor” (cost of capital)-channel
<ul style="list-style-type: none">• Gambling	<ul style="list-style-type: none">• Interest rate
<ul style="list-style-type: none">• Fossil Energy (Coal/Oil/Gas etc.)	<ul style="list-style-type: none">• Risk premia / Beta

Different Approaches

Factors can be a reasonable basis for materiality

Economic materiality of factors is well documented

Factor	Description
Value	In the long run, stocks that appear cheap according to accepted metrics tend to outperform. Empiricism cites distress risk, overreaction, forced selling and index migration (<i>Graham/Dodd; 1934; Fama/French 1992;1997; Basu; 1977</i>)
Carry	Stocks from companies that deliver sustainable growth, underpinned by low analyst earnings dispersion and distributed via dividends and share buybacks tend to deliver excess returns in the long run. Empirical papers cite carry, low earnings dispersion and underreaction to good news (<i>Harvey, 2000; Liodakis, 2003; Gwilym,2008; Moskowitz, 2013</i>)
Quality	In the long run, stocks from companies that exhibit higher balance sheet, income and cash flow statement quality tend to outperform. Empiricism cites expensiveness of junk stocks, lottery tickets and beta constraints (<i>Altmann, 1968; Ohlson, 1980; Piotroski, 2000; Asness 2013</i>)
Size	Stocks with lower market capitalization tend to outperform large caps over time. Empirical literature cites higher default and liquidity risk as well as index migration (<i>Banz, 1980; Fama/French, 1993; Barry, 2002; Guidolin, 2005; Asness 2015</i>)
Momentum	In the long run, stocks with higher price momentum deliver higher returns. Researchers from various fields found reversal risk, over- and under-reaction as an explanation (<i>Jegadeesh/Titman, 1993; Chan/Jegadeesh/Lakonishok,1996; Carhardt, 1997</i>)
Low Risk	Stocks with lower stock price volatility tend to outperform in the long run. Empiricism cites expensiveness of junk stocks, lottery tickets, over-confidence, shorting/leverage/beta constraints and fund flows as possible explanations (<i>Haugen/Baker, 1991; Blitz/van Vliet, 2007; Haugen/Baker, 2008; Cowan/Wilderman, 2011</i>)
Low Carbon	Stocks with lower carbon exposure outperform due to higher growth opportunities (<i>Wesentlichkeit von CO₂-Emissionen für Investitionsentscheidungen Prof. Dr. Alexander Bassen/Prof. Dr. Timo Busch/Stefan Lewandowski / Franziska Sump, 2016</i>); <i>In search for climate smart investments – the case of European equities (Alpha Centauri, ISS ESG, Prof. Bassen, Uni Hamburg; Decarbonization Factors, Harvard University 2019</i>)

Different Approaches

Some papers validate the existence of factors in ESG and Low Carbon

Papers

ESG and financial performance: aggregated evidence from more than 2000 empirical studies

Gunter Friede¹, Timo Busch^{2*} and Alexander Bassen³

¹Deutsche Asset & Wealth Management Investment, Frankfurt am Main, Germany; ²School of Business, Economics and Social Sciences, University of Garmisch-Partenkirchen, Germany
(Received 22 October 2015; accepted 9 November 2015)

The search for a relation between environmental, social, and governance (ESG) criteria and corporate financial performance (CFP) can be traced back to the beginning of the 1970s. Scholars and investors have published more than 2000 empirical studies and several review articles on this relation since then. The largest previous review study analyses just a fraction of existing primary studies, making findings difficult to overview. Thus, this article on the financial effects of ESG criteria remains the only study that extracts all provided primary and secondary data. Through doing this, the study confirms the results of existing studies. Hence, this study is by far the most exhaustive and allows for generalizable statements. The results are especially very well founded. If ESG CFP relations exist, they are positive. We highlight that the positive ESG impact is more pronounced when differentiating by age, young asset classes for ESG investing each year exist.

Keywords: secondary meta-analysis; systematic literature review

Introduction

Close to 40 trillion US Dollars in assets under management are currently managed by P&I investors (P&I 2015a). On the one hand, this drives financial markets toward environmental, social, and governance (ESG) criteria. However, on the other hand, the resulting sustainable investment practices remain unclear.

Towards Green Alpha: Analyzing ESG Exposures Through a Factor Lens

May 15, 2020

Ananth Madhavan, Aleksander Sobczyk, and Andrew Ang¹

Abstract

Using data on 1,337 US equity sector neutral funds with \$5.9 trillion in AUM, we analyze the link between funds' "bottom up" holdings-based environmental, social, and governance (ESG) scores and funds' return returns, risk factor loadings, and alphas. We find that funds with high ESG scores do have different profiles of factor loadings than low-scoring ESG funds. In particular, funds with high Environmental scores tend to have high quality and momentum factor loadings. In partitioning the ESG scores into components that are related to factors (Factor ESG) and idiosyncratic components (idiosyncratic ESG), we find strong positive relations between fund alphas and Factor ESG scores.

Data challenges in ESG

Disagreement in ESG data and ratings across providers

MIT /2019

IDEAS MADE TO MATTER | SUSTAINABILITY

Why ESG ratings vary so widely (and what you can do about it)

by Tracy Mayor | Aug 26, 2019

Why It Matters

It's hard to assess corporate social responsibility when ratings diverge so dramatically. Research suggests ways to work around the 'aggregate confusion.'

Share ↗

Environmental, Social, Governance. In recent years, ESG, also known as sustainability or corporate social responsibility, has moved from the feel-good fringes to the center of business decision-making.

Consumers want to purchase products from companies that reflect their values — environmental protection, the empowerment of women, or the absence of child labor, for example. Investors, meanwhile, want to know if they are financing activities that might pose a reputational risk.

Their message is getting through — by [one estimate](#), some 80% of CEOs believe demonstrating a commitment to society is important and look to sustainability ratings for guidance and benchmarking. An estimated \$30 trillion of assets are invested worldwide that rely in some way on ESG information, a figure that has grown 34% since 2016.

ALPHA CENTAURI

Passive strategies with a low tracking-error to traditional benchmarks

... and the question, if they can add economic value beyond “doing good”

Passive strategies

Passive means low tracking error to benchmark not ETF to underlying index

Investors shouldn't expect outperformance - even in an adverse scenario

Passive strategies

Passive exposures target the left side, everything else needs active risk-taking

Principles, values & beliefs	Economic materiality

ALPHA CENTAURI

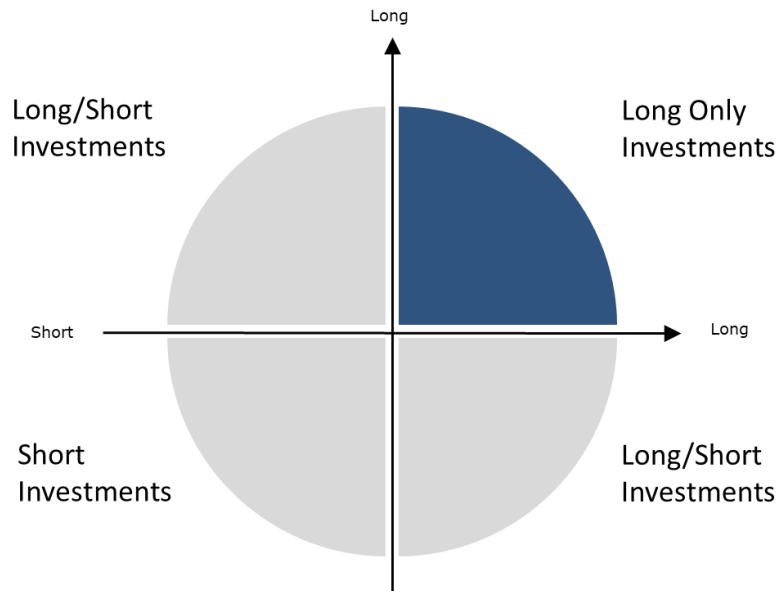

Factor Investing in combination with carbon footprint reduction

... and the question if this combination can deliver
a better risk-/return trade-off than passive
approaches via ETF or active Long Only-strategies

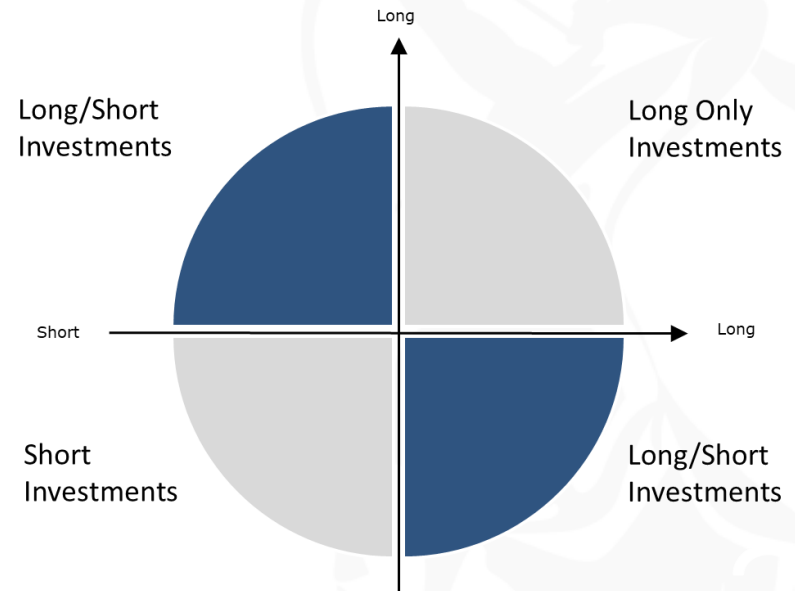

The case for Long/Short

Long/Short - higher returns, lower level of „unintended risks“

Wasted return opportunities (grey)

Better opportunity set

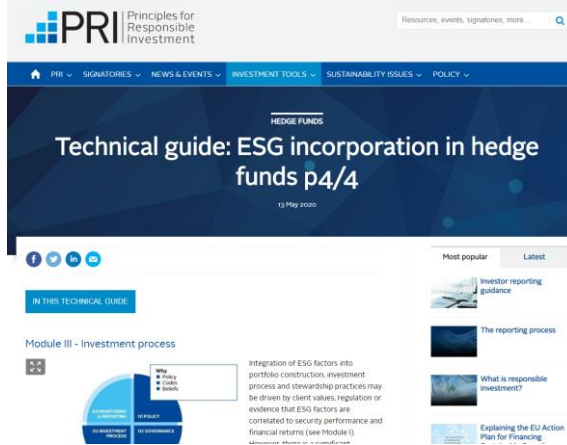

- Long Only active
 - „Wasted opportunities“ in Long Only investments
 - „Unintended bets“ because of weights-based allocation instead of risk-based portfolio construction
- Long/Short
 - Higher return potential, better risk control
 - Higher transfer coefficient for active positions

The case for Long/Short

UN-PRI and AIMA: Short Selling excellent way to implement ESG

UN-PRI Technical Guide

Quotation

...“There are a range of questions around the relationship between ESG and short selling. Short selling is one way for a hedge fund manager to express the view that an entity is not adequately incorporating ESG factors.”....

AIMA Whitepaper

Quotation

...“Short selling can be an excellent tool for achieving two common goals of contemporary responsible investment: mitigating undesired ESG risks, and, when taken in aggregate, creating an economic impact by influencing the nature of capital flows through ‘active’ investing.”.....

AC Climate Smart Long Short

Combination of equity factors + low carbon factor

Focus on Excess Return and CO₂ footprint reduction

	2021	2020	2019	2018	2017	2016
Performance	4,96%	11,87%	-4,30%	0,51%	5,83%	2,5%
Volatility	4,81%	8,43%				

** Past performance is no guarantee of future returns. Fees, commissions and other costs may have a negative impact on performance. Returns may increase or decrease due to currency fluctuations. The performance is the percentage change between the value of assets at the beginning and at the end of the investment period. Source: Alpha Centauri Investment Management GmbH. Portable Beta

Long/Short can be „ported“ on any benchmark

STOXX 600 Europe

Volatility

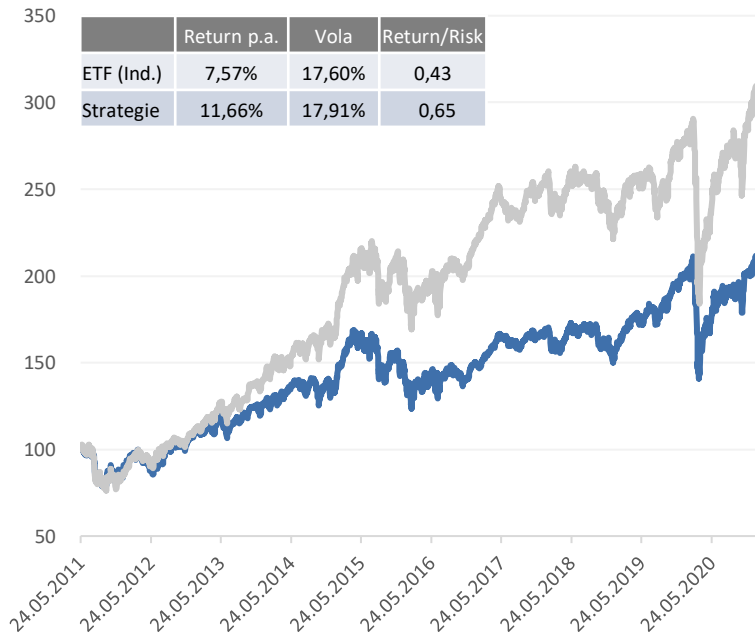

- Combination of Long Only (Benchmark) and Long/Short in one product
- Substantial improvement in return without a material impact on risk

Portable Beta

Comparison to ESG ETF's – higher Sharpe ratio, **negative CO₂ footprint**

Europe

Eurozone

- „Porting“ of Long/Short- factor betas on a Long Only benchmark or existing equity portfolio more efficient than conventional active Long Only
- **Higher return expectation, better Sharpe Ratio and higher carbon efficiency**

ESG, Factor Exposures and ETF's

Summary

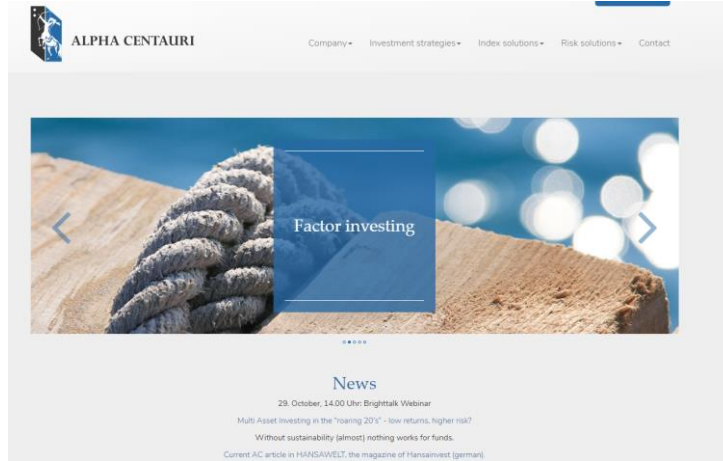

Key takeaways / Our views

Different approaches to ESG- and Low Carbon investments	<ul style="list-style-type: none">• ... are easy to implement in the light of more than 700 ESG ETF's• ... need a holistic view on portfolio risk with respect to the findings of Northern Trust
Data challenges in ESG	<ul style="list-style-type: none">• ... are a major problem in ESG• ... will persist even with a more unified taxonomy (backfilling & overwriting)
Passive strategies with a low tracking error to traditional benchmarks	<ul style="list-style-type: none">• ... add no economic value (in terms of outperformance) beyond "doing good" in our point of view
Factor Investing in combination with carbon footprint reduction	<ul style="list-style-type: none">• ... can deliver a better risk-/return trade-off than passive approaches via ETF or active Long Only-strategies
